

MO&DA Requirements and System Engineering

Bryan Dorland
MO&DA System Engineer
USNO
202-762-0134
bdorland@usno.navy.mil

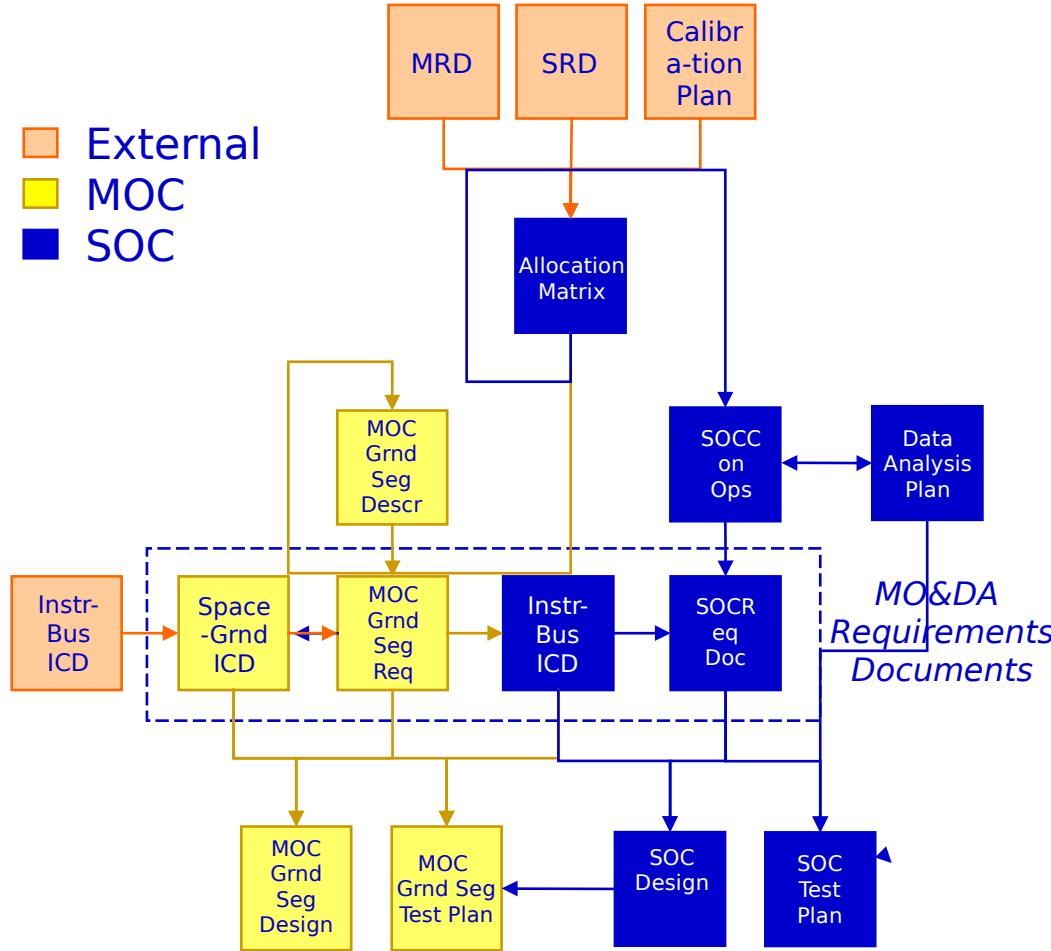

Presentation Outline

- Requirements Flow
- Documentation
- Requirements Allocation
- Data Flow Concept
- Interface Control
- Risks and Risk Mitigation

Requirements Flow

- External
- MOC
- SOC

- **Mission Level Requirements**
 - Mission Requirements Document
 - Science Requirements Document
 - Calibration Plan
- **MO&DA Requirements Identified and Allocated Via Allocation Matrix**
- **Interpretation of Mission Requirements**
 - MOC Ground Segment Description
 - SOC Concept of Operations
 - Data Analysis Plan
- **External ICDs**
- **MO&DA System Requirements**
- **Design and Test Plans**

MO&DA Documentation

Category	Document	PDR Version	Lead Author	Description
	Requirements Allocation Matrix	1.0	Dorland	Allocation of requirements to MO&DA systems/subsystems. Contained as appendix in Req. Doc.
Concept of Operations	SOC Concept of Operations	1.0	Dorland	Overall description of SOC system.
	Ground Segment Description	1.0	Klein	Description of FAME Ground System: Emphasis on MOC.
	Data Analysis Plan	2.0	Kaplan	Description of data analysis processing concepts.
Requirements	SOC Requirements	1.0	Dorland	SOC System Requirements.
	Ground Software Requirements Document	1.0	Klein	MOC System Requirements.
	Space-Ground ICD	0.8	Dorland	Specification of interface between observatory and ground station
	MOC-SOC ICD	<i>Draft</i>	Dorland	Specification of interface between MOC and SOC.
Development	SOC Software Management Plan	2.0	Bangert	High-level description of software design and development policies for FAME.
	SOC Software Development Plan	1.0	Codella	Implementation of SMP. Detailed description of FAME software design and development policies, including schedules, QA, CM, etc.
	Ground Software Development Plan	1.0	Klein	Description of software development policies for MOC.
011030 FAME_PDR_MO&DA_Rqmts&SysEng_4 SOC Design Document		1.0	Codella	SOC APP system design document

Requirements Allocation

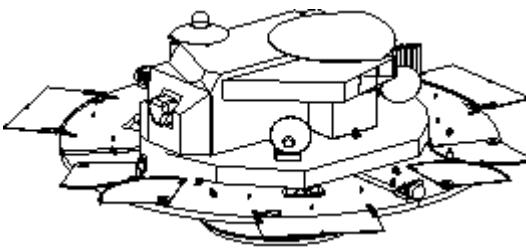

- **Allocation Matrix Is Contained As an Appendix in the SOC Requirements Document**
- **Allocation Matrix Identifies MRD, SRD and Calibration Plan Requirements and Assigns Each to One or More of the Following:**
 - MOC
 - SOC/ADP System
 - Data Ingestion
 - Data Archive
 - Quicklook
 - Data Analysis Trending
 - Data Analysis
 - SOC/Operations
 - Data Simulator
- **Each Allocated Requirement Traced to One or More Specific System Requirements in Requirements Documents**

MO&DA Data Flow and Interfaces

FAME Observatory

Space-Ground Interface

Housekeeping Telemetry
Instr. Data uploads
Tasking and uploads

Housekeeping Telemetry
Instr. Data uploads
Tasking and uploads

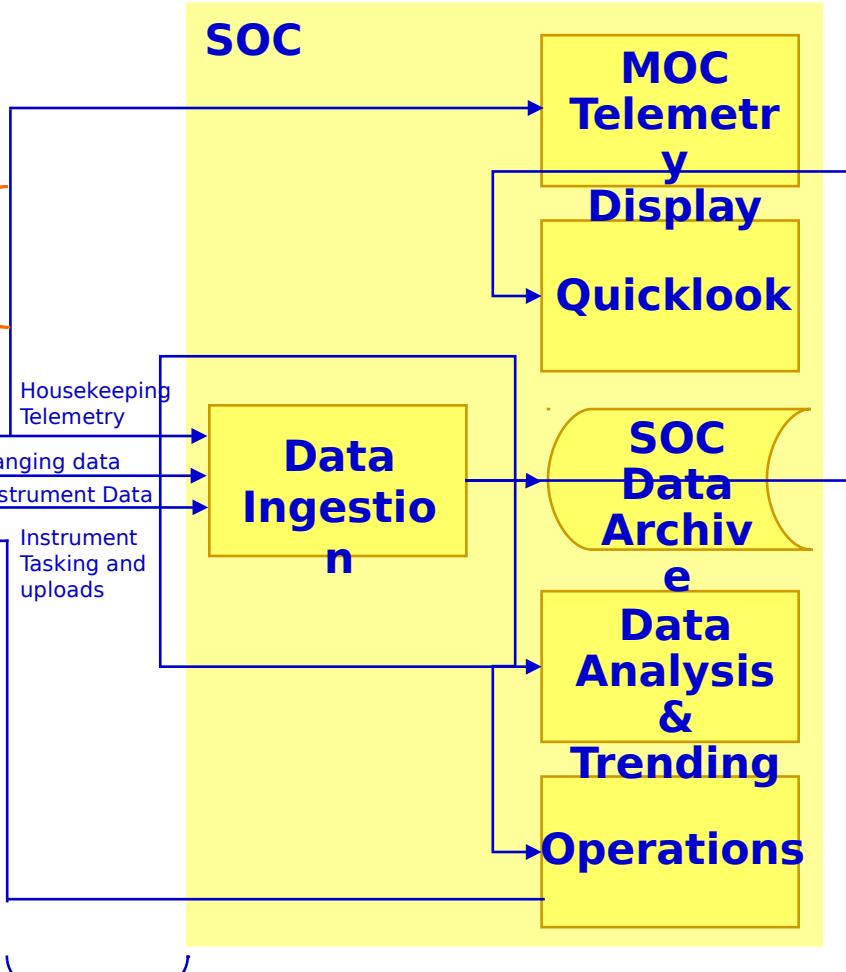

Ground Station

MOC Data Archive

Housekeeping Telemetry
Ranging data
Instrument Data
Tasking and uploads

MOC

**MOC-SOC Interface
(Nominally, T-1 Speed)**

- Space-Ground Interface
 - Streaming Data
- MOC Processing
 - Bundle Data Stream Into ~15 Minute Recording Files
 - Write Copies of All Data Products to Off-Line Storage
- MOC-SOC Interface
 - Primary Pipe: Discrete Files
 - Telemetry Display Pipe: Streaming
- SOC Ingest Processing
 - Unpack Recording Files
 - Make Data Available to Subsystems for Further Processing
 - Includes Off-Line Data Storage
- Data Simulator (Not Shown)
 - Simulates MOC Generated Data and Interface

Qualification Provisions

System/Subsystem	Qualification Provision	Comments
MOC	Demonstration and Test	Discussed in MOC Presentation
SOC-Data Ingestion	Test	Tested Using Data Simulator Output
SOC-Data Archive	Test	Tested Using Data Simulator Output
SOC-Quicklook	Test	Tested Using Data Simulator Output
SOC-Data Analysis and Trending	Test	Tested Using Data Simulator Output
SOC-Operations	Demonstration and Test	Data Simulator Output Used for Tests
SOC-Telemetry Display System	Test	Test to Ensure Displays Match MOC Displays

Risks and Risk Mitigation

Category	Risk	Assessed Level <i>(Post Mitigation)</i>	Mitigation
Single Measurement Accuracy	Inability to Meet Single Measurement Centroiding Accuracy Requirement	Medium	Algorithm Prototyping Using Data Simulator Inputs
Systematic Errors	Inability to Reduce Systematic Errors Through Processing to Meet Mission Accuracy Requirements	Medium	Algorithm Prototyping Using Data Simulator Inputs
External Interface Stability	Data Formats and Contents Still in Flux	Low	Participate in Interface Definition Process, Adhere to Development Schedule
Data Throughput and Storage	Large Volume of Data May Present Processing And/or Storage Problems	Low	Hardware and Software Prototyping
Software Development Cost	Insufficient Budget	Low	Employ Formal SW Development Methodology
